

Smt.TANUBEN & MANUBHAI TRIVEDI COLLEGE OF
INFORMATION SCIENCE (B.C.A)

AFFILITED TO
VEER NARMAD SOUTH GUJARAT UNIVERSITY,
SURAT

Project Report
On
“Internship”
As A Practical Requirements
For
The Degree of Bachelor of Computer Application
(B.C.A)

GUIDED BY:

Dr. Pankaj S. Mishra:

SUBMITTED BY:

Sneha A. Mistri-2172

Principal Signature:

Acknowledgment

I, Mistri Sneha Alpeshbhai, a student of Bachelor of Computer Applications (B.C.A.) at **Smt. Tanuben & Dr. Manubhai Trivedi College of Information**, Surat, would like to express my deepest gratitude to all the individuals and organizations who supported and guided me throughout this internship journey.

First and foremost, I am immensely grateful to **Tripoly Studio Pvt Ltd**, for providing me this valuable opportunity to work as a React.js Intern. The organization's professional environment, collaborative culture, and industry-grade projects gave me an exceptional platform to apply my academic knowledge to real-world software development.

I extend my heartfelt thanks to my industry mentor **Mr. Rushi Maru** and **Mr. Vishal Bharadva** for their consistent guidance, patience, and willingness to answer my questions at every step. Their practical insights into React.js development, REST API integration, and frontend architecture were invaluable to my growth as a developer during this internship.

I also sincerely thank the faculty members and the Internship Guide **Dr Pankaj S. Mishra** at Smt. Tanuben & Dr. Manubhai Trivedi College of Information for their academic guidance, constant encouragement, and support in completing the documentation and submission process.

Lastly, I am grateful to my family and friends for their motivation, understanding, and moral support throughout the duration of this internship. This experience has not only enhanced my technical capabilities but also refined my professional attitude, communication skills, and problem-solving abilities.

Mistri Sneha Alpeshbhai

Certificate

The following internship certificates issued by Tripoly Studio Pvt Ltd are enclosed as official proof of internship completion:

1 Internship Completion Certificate

The Internship Completion Certificate was issued on 18th December 2025, certifying the successful completion of 120 hours of React.js internship training with Grade A+ and 55 out of 60 marks.

303, B Square 1, Nr. Neptune House, Vikaram Nagar,
Ambali - Bopal Rd, Ahmedabad - 380058 India, Gujarat.
Email : info@tripolystudio.com
Web : www.tripolystudio.com
Office : 079 40371717 | Mo : +91 9898 841717

Internship Certificate

Date: 18-12-2025

To,

Dear Ms. Mistri Sneha Alpeshbhai

Sub: Internship Completion Certificate

This is to certify that Ms. Mistri Sneha Alpeshbhai (Enrollment No.: E23110203000910102), a student of Smt. Tanuben & Dr. Manubhai Trivedi College of Information, has successfully completed her internship at our organization from 1st November 2025 a duration of 120 Hours, on the internship training course with grade A+ and marks 55 out of 60 for React.js.

During this internship, Sneha worked diligently and demonstrated a strong understanding of the domain. her responsibilities included designing, developing, and implementing components related to the course. she exhibited excellent analytical skills, technical proficiency, and a professional approach throughout the project.

We appreciate her contribution and wish her great success in all future endeavours.

Yours truly,
For Tripoly Studio Pvt Ltd,

A handwritten signature in blue ink, appearing to read 'Sneha', is written over a horizontal line.

Autho. Signatory

2 Internship Joining Letter

The Letter of Internship Joining was issued on 15th October 2025, confirming the appointment of the student as a React.js Intern with a stipend of ₹2,000 INR for the duration of the internship commencing 1st November 2025.

303, B Square 1, Nr. Neptune House, Vikaram Nagar,
Ambali - Bopal Rd, Ahmedabad - 380058 India, Gujarat.
Email : info@tripolystudio.com
Web : www.tripolystudio.com
Office : 079 40371717 | Mo : +91 9898 841717

Letter of Internship Joining

Date: 15-10-2025

To,

Dear Ms. Mistri Sneha Alpeshbhai

Sub: Letter of Internship Joining

We are pleased to offer you an internship position in our organization as **React.js Intern**. We believe that this internship will provide you with valuable experience and learning opportunities in your chosen field. Your appointment at will commence on **1st November 2025**.

Stipend/Compensation: You will receive a stipend of 2000/- INR for the duration of your internship, payable in accordance with our company's payment schedule.

Duration: Your internship will have a duration of **120 Hours**, starting from **1st November 2025**.

To accept this internship, offer please sign and return a copy. You can send it back to us via email at vishal@tripolystudio.com or by mail to the address mentioned above. If you have any questions or need clarification on any aspect of your internship, please do not hesitate to contact Mr. Vishal Bharadva at vishal@tripolystudio.com or 9898869160.

We congratulate you on your appointment and wish you a long and successful career with us. We are confident that your contribution will take us further in our journey towards becoming world leaders. We assure you of our support for your professional development and growth.

Yours truly,
For Tripoly Studio Pvt Ltd,

A handwritten signature in blue ink, appearing to read 'Vishal', is written over a horizontal line.

Autho. Signatory

1. Declaration

I, Mistri Sneha Alpeshbhai, Enrollment No. E23110203000910102, a student of Bachelor of Computer Applications (B.C.A.), at Smt. Tanuben & Dr. Manubhai Trivedi College of Information, Surat, Gujarat, hereby solemnly declare the following:

1. This Internship Report has been prepared by me based on my personal experience, observations, and work done during my internship at Tripoly Studio Pvt Ltd, from 1st November 2025 to 30th November 2025.
2. The information, content, and findings presented in this report are original and to the best of my knowledge, are true and accurate.
3. This report has not been submitted, either in part or in full, to any other university, institution, or examining body for the award of any degree, diploma, or certificate.
4. All references, sources of information, and resources used during the preparation of this report have been duly acknowledged in the References section.

Mistri Sneha Alpeshbhai

Enrollment No.: E23110203000910102

2. Internship Details

2.1 Organization Profile

Organization Name	Tripoly Studio Pvt Ltd
Type of Organization	Private Limited Company – IT Services
Registered Address	503-HariOm Complex, Opps. Rushabh tower , Adajan Patiya
Website	www.tripolystudio.com
Email	info@tripolystudio.com
Phone	Office: 079-40371717 Mobile: +91 9898 841717
Industry	Information Technology – Web & Mobile Application Development
Services Offered	Web Development, Mobile App Development, UI/UX Design, Digital Marketing

2.2 Internship Configuration

Department / Team	Web Development Team – React.js Frontend
Internship Role	React.js Intern
Internship Mode	Offline
Start Date	1st November 2025
End Date	30th November 2025
Total Duration	120 Hours
Stipend	₹2,000 INR (for internship duration)
Industry Mentor	Mr. Rushi Maru
Contact Person	Mr. Vishal Bharadva – vishal@tripolystudio.com / 9898869160
Grade Awarded	A+ (55 out of 60)

3. Objectives of Internship

The internship was undertaken with the following clearly defined technical and professional objectives:

3.1 Primary Technical Objectives

- To gain hands-on, production-grade experience in React.js – including functional components, JSX, props, state management (useState), and lifecycle methods (useEffect).
- To develop the ability to build complete, responsive, and pixel-perfect frontend user interfaces using React.js, CSS, and Bootstrap 5.
- To learn and implement REST API integration using Axios for fetching, posting, and managing dynamic data from backend servers in real time.
- To understand the principles of component reusability, modular code architecture, and React project folder structure as used in professional settings.
- To gain exposure to a full project lifecycle – from requirement analysis and design to development, API integration, testing, and delivery.

3.2 Secondary & Professional Objectives

- To understand industry workflows, sprint-based task management, and how developers collaborate in a professional team environment.
- To improve debugging, problem-solving by working on real features and overcoming development challenges independently.
- To develop strong communication and self-management skills required in a remote/online work environment.
- To build a portfolio project (Restaurant Management Web Application) demonstrating frontend development capabilities to future employers.
- To bridge the gap between academic learning and real-world software engineering practices.

3.3 Expected Learning Outcomes

By the end of the internship, the following competencies were expected to be achieved:

- Proficiency in React.js component-based architecture.
- Ability to integrate and consume RESTful APIs in a React frontend application.
- Understanding of responsive UI design principles and Bootstrap layout system.
- Familiarity with professional tools: VS Code, GitHub, Postman, and browser DevTools.
- Confidence to independently build and deliver a full frontend web application.

4. Description of Work Done

4.1 Project Overview

The primary project assigned during the internship was the development of a Restaurant Management Web Application. This was a real-world client-facing project that required the intern to design and develop the complete frontend using React.js. The application serves as a digital platform for restaurants to showcase their menus, manage orders, and allow customers to browse items and add them to a cart for online ordering.

The project was divided into multiple development phases, each corresponding to a week of work. The phases covered UI/UX design for the restaurant menu, full website layout development, REST API integration for dynamic data, and cart/order management functionality.

Project Name	Restaurant Management / Website Development
Project Type	Client-based Web Application Development
Technology	React.js, JSX, CSS, Bootstrap, REST API, Axios
Mentor	Rushi Maru
Duration	4 Weeks (November 2025)
Final Output	Fully functional responsive restaurant web application

4.2 Week-wise Detailed Task Description

Week 1 (03/11/2025): Designing the Restaurant Menu UI

Task Assigned: Design Restaurant Menu with Description & Image Layout

In the first week, the task was to design a fully responsive restaurant menu UI for the web application. This required creating React functional components for displaying individual menu items including their name, description, price, and an image.

Work Completed:

- Designed the overall component structure for the menu section including MenuContainer, MenuCard, and MenuImage components.
- Created responsive card-style menu items using CSS Flexbox and Grid layout, ensuring proper alignment across different screen sizes.
- Implemented image handling in JSX using proper src bindings and alt attributes for accessibility.
- Applied custom CSS styling for fonts, card shadows, hover effects, and color themes matching the restaurant brand aesthetic.
- Used React props to pass menu item data (name, price, description, image URL) from parent to child components.

Tools & Technologies Used: React.js, JSX, CSS, VS Code

Learning: This week introduced the foundational concept of React props, component decomposition, and CSS styling within a JSX environment. The challenge of building a layout that looks professional required careful use of CSS variables and class naming conventions.

Week 2 (10/11/2025): API Integration for Dynamic Menu

Task Assigned: Integrate backend API to fetch dynamic menu data

The second week focused on making the previously static menu UI dynamic by connecting it to a backend REST API. This involved using Axios to make HTTP GET requests and render the returned data inside the React components.

Work Completed:

- Installed and configured Axios as the HTTP client for making API calls within the React project.
- Used the useEffect hook to trigger the API call when the MenuContainer component mounted, and useState to store the fetched data.
- Implemented loading state management – displaying a spinner or placeholder while data was being fetched, and rendering menu items once data was available.

- Handled API error states gracefully by displaying appropriate error messages to the user.
- Mapped the API response array to render individual MenuCard components dynamically using React's .map() method.
- Tested API responses using Postman before integrating into the frontend.

Tools & Technologies Used: React.js, REST API, Axios, Postman

Learning: This week was a major milestone as it involved integrating real data into the application. Working with async/await, handling loading and error states, and understanding JSON response structures from APIs were key takeaways.

Week 3 (17/11/2025): Full Restaurant Website Design

Task Assigned: Design the complete restaurant website including homepage, menu section, and navigation

The third week expanded the scope from just the menu component to building the entire restaurant website layout. This included designing a multi-section homepage with a navigation bar, hero section, menu section, and footer.

Work Completed:

- Designed and built a responsive Navbar component with the restaurant logo, navigation links (Home, Menu, About, Contact), and a mobile hamburger menu toggle.
- Created a full-width Hero/Banner section with background image overlay, restaurant name, tagline, and a 'View Menu' call-to-action button.
- Built an 'About Us' section providing information about the restaurant, its ambiance, and specialties.
- Integrated the dynamic menu section built in Week 2 as part of the main website page.
- Designed a Contact section with address, phone number, and Google Maps embed placeholder.
- Created a Footer component with social media links, copyright text, and quick navigation links.

- Applied Bootstrap 5 grid system throughout the website to ensure full responsiveness on mobile, tablet, and desktop screen sizes.

Tools & Technologies Used: React.js, CSS, Bootstrap 5, VS Code

Learning: Learned how to manage multiple components and routes within a single React application. Understanding of Bootstrap's grid system, breakpoints, and responsive utility classes was significantly improved during this week.

Week 4 (24/11/2025): API Integration for Dynamic Data & Cart Management

Task Assigned: Connect APIs for menu categories, item availability, online orders, and cart

The final week focused on building the most complex features of the application – dynamic content management, online ordering, and cart functionality. This involved multiple API endpoints and complex state management.

Work Completed:

- Integrated category-based menu filtering API to allow users to browse items by categories (e.g., Starters, Main Course, Desserts, Beverages).
- Implemented real-time item availability status – items marked as unavailable from the backend were displayed with a 'Not Available' badge and disabled from being added to the cart.
- Built a fully functional Cart component with the ability to add items, remove items, adjust quantities, and calculate the total bill.
- Connected the order placement API to submit cart data to the backend and display an order confirmation screen.
- Used React Context API (or lifted state) to manage cart state globally across components – enabling any part of the application to access and update the cart.
- Implemented cart item count in the navbar that updates in real-time as items are added or removed.

Tools & Technologies Used: React.js, REST API, Axios, React Context API

Learning: This was the most technically challenging week. Managing shared state across multiple components, handling API responses with complex nested structures, and ensuring UI updates in real time were significant learning experiences.

4.3 Technologies & Tools Used

The following technologies, frameworks, libraries, and tools were utilized during the internship:

S.No.	Technology / Tool	Purpose & Usage
1	React.js (v18)	Main JavaScript library for building component-based user interfaces.
2	JSX	JavaScript XML syntax used within React for writing HTML-like UI elements in .js files.
3	CSS3	Custom styling including Flexbox, Grid, animations, hover effects, and CSS variables.
4	Bootstrap 5	Responsive grid system, utility classes, navbar, buttons, and card components.
5	Axios	Promise-based HTTP client for making GET/POST API requests to the backend server.
6	REST API	Backend API endpoints for menu data, categories, orders, and cart management.
7	React Hooks	useState for state management, useEffect for side effects, useContext for global state.
8	VS Code	Primary integrated development environment (IDE) used for coding throughout the internship.

9	Postman	API testing tool used to test and verify backend endpoints before frontend integration.
10	Google Chrome DevTools	Browser developer tools for debugging, inspecting elements, and checking network requests.
11	npm	Node Package Manager used for installing React dependencies and running development server.
12	Git / GitHub	Version control system used for tracking code changes and collaborating with the team.

5. Learning Outcomes

The internship at Tripoly Studio Pvt Ltd resulted in significant technical and professional growth. The following section documents the key skills, knowledge, and competencies gained:

5.1 Technical Skills Developed

Skill Area	Details
React.js Fundamentals	Deep understanding of functional components, JSX, props, state (useState), side effects (useEffect), and context (useContext).
Component Architecture	Ability to design reusable, maintainable component hierarchies and understand the parent-child relationship model.
API Integration	Proficient in using Axios for REST API calls, handling async/await, managing loading/error states, and processing JSON responses.
Responsive Web Design	Strong practical knowledge of Bootstrap 5 grid system, media queries, CSS Flexbox and Grid for cross-device compatibility.
State Management	Understood how to lift state up, use Context API for global state, and manage complex UI state scenarios like cart management.
Debugging & Testing	Gained experience using Chrome DevTools, React Developer Tools extension, and Postman for API testing and debugging.

5.2 Professional & Soft Skills Developed

- Time Management: Learned to estimate task durations and deliver work within weekly deadlines set by the supervisor.
- Communication: Improved ability to clearly describe technical progress, raise blockers, and ask focused questions during mentorship sessions.
- Self-Learning: Developed the habit of consulting React documentation, Stack Overflow, and YouTube tutorials to independently resolve issues.
- Attention to Detail: UI development cultivated precision – pixel-perfect layouts, consistent spacing, and cross-browser compatibility.
- Professionalism: Understood workplace etiquette, how to receive feedback constructively, and the importance of clean, documented code.

6. Challenges and Solutions

The internship presented several technical challenges that required problem-solving, research, and guidance from the mentor. Each challenge contributed significantly to the learning experience:

Challenge 1: Managing Asynchronous API Calls and Loading States

Description: Initially, handling asynchronous data fetching using Axios inside React components was confusing. API calls made inside `useEffect` were running at unexpected times, and the component was trying to render data before it arrived, causing blank screens or crashes.

Solution: After studying the React documentation and guidance from the mentor, I implemented a proper `async/await` pattern within `useEffect`, and added a loading state variable (`isLoading`) that controlled whether the spinner or the actual data was rendered. The error state was separately managed to show user-friendly error messages when the API failed.

Key Learning: Proper sequencing of `async` operations in React requires careful management of multiple state variables. The pattern: `isLoading` → `fetch` → `setData` → `setLoading(false)` became a standard template used throughout the project.

Challenge 2: Building Fully Responsive Layouts

Description: Ensuring that the restaurant website looked good and functioned correctly across mobile, tablet, and desktop screen sizes was more complex than expected. Some elements like the navigation bar, menu cards, and hero section would break on smaller screens.

Solution: Systematically applied Bootstrap's responsive grid classes (`col-12`, `col-md-6`, `col-lg-4`) and used CSS media queries to override styles for specific breakpoints. The navbar was converted to a collapsible hamburger menu for mobile devices using Bootstrap's `Navbar` component.

Key Learning: Responsive design requires thinking mobile-first. Testing in Chrome DevTools with device emulation at every stage of development, rather than at the end, prevents major layout issues.

Challenge 3: Global Cart State Management

Description: Managing the cart state across multiple components (Navbar cart count, Menu page add buttons, and Cart drawer) was a major challenge. Using only local state (useState) caused the cart to lose data when components were unmounted or navigated away from.

Solution: Implemented React Context API to create a global CartContext that stored the cart items array. The CartProvider component wrapped the entire application, making the cart state and dispatch functions available to all child components without prop drilling. This resolved the synchronization issue across all components.

Key Learning: React Context API is the right tool for truly global state like authentication and cart data. Understanding when to use local state vs. global state is a critical architectural decision in React development.

Challenge 4: Understanding and Navigating a Real Industry Codebase

Description: When starting the internship, the existing project had multiple folders, components, utility files, and configuration files. Understanding the overall structure and finding where to make changes was initially overwhelming.

Solution: Systematically explored the folder structure with the mentor's guidance. Studied the existing components first before writing any new code. Started with small, isolated changes to understand data flow before working on larger features. Reading code comments and asking specific questions proved highly effective.

Key Learning: Reading and understanding existing code is one of the most important skills for a professional developer. Never modify code without first understanding what it does and why.

Challenge 5: Handling API Errors and Edge Cases

Description: APIs would sometimes return empty arrays, null values, or error responses (404, 500), which caused the application to crash or display broken layouts. Edge cases like empty menus or unavailable items were not initially handled.

Solution: Added conditional rendering in React components to handle empty arrays (showing a 'No items available' message), null values (using optional chaining `?.operator`), and API errors (try-catch blocks with error state). Tested these scenarios explicitly using Postman with modified responses.

Key Learning: Real-world applications must always handle edge cases gracefully. Defensive programming – always checking for null, undefined, or empty data – is essential for building robust user interfaces.

7. Weekly Summary (Logbook)

The following table is a detailed weekly summary derived from the internship logbook, recording the tasks assigned, work completed, technologies used, and key learnings for each week:

Week	Date	Task Assigned	Work Completed	Tools Used
Week 1	03/11/2025	Design Restaurant Menu UI with Description & Image	Designed responsive restaurant menu UI with item name, description, price, and image layout using card components	React.js, JSX, CSS
Week 2	10/11/2025	API Integration for Dynamic Menu	Integrated backend REST API using Axios to fetch and dynamically render menu data with loading and error state management	React.js, REST API, Axios, Postman
Week 3	17/11/2025	Design Full Restaurant Website	Built complete website UI: Navbar, Hero section, Menu section, About, Contact, and Footer with full responsiveness	React.js, CSS, Bootstrap 5
Week 4	24/11/2025	API Integration for Dynamic Data & Cart Management	Connected APIs for menu categories, item availability, online ordering, and built a fully functional cart with global state	React.js, REST API, Axios, Context API

8. Performance Evaluation

8.1 Grade & Score Summary

The following performance evaluation was provided by Tripoly Studio Pvt Ltd upon successful completion of the internship:

Evaluation Parameter	Score / Rating	Remarks
Overall Internship Grade	A+	Excellent Performance
Marks Obtained	55 out of 60	91.67%
Technical Knowledge	Outstanding	Strong React.js & API skills demonstrated
Work Quality	Excellent	Professional UI components delivered
Analytical Skills	Excellent	Effectively solved complex challenges
Professional Approach	Outstanding	Timely submissions, responsive communication

8.2 Supervisor's Remarks

"During this internship, Sneha worked diligently and demonstrated a strong understanding of the domain. Her responsibilities included designing, developing, and implementing components related to the course. She exhibited excellent analytical skills, technical proficiency, and a professional approach throughout the project." — Tripoly Studio Pvt Ltd

9. Conclusion

The internship at Tripoly Studio Pvt Ltd, Ahmedabad, spanning 120 hours from 1st November to 18th December 2025, has been one of the most impactful and enriching experiences of my academic journey. Working as a React.js Intern on a live restaurant management web application provided me with the rare opportunity to apply classroom concepts to solve real-world engineering challenges under professional supervision.

Over the four weeks of active development, I progressed from building static UI components to integrating live REST APIs, managing complex application state with React Context, and delivering a fully functional, responsive web application. The achievement of Grade A+ with 55 out of 60 marks is a reflection of the dedication, hard work, and learning demonstrated throughout this internship.

The technical competencies gained during this internship – particularly in React.js, Axios API integration, Bootstrap responsive design, and state management – have significantly raised my confidence as a frontend developer. Beyond technical skills, the internship developed crucial professional qualities including time management, structured problem-solving, self-directed learning, and effective communication in a professional environment.

The guidance and mentorship provided by Mr. Rushi Maru and Mr. Vishal Bharadva were invaluable. Their feedback, code reviews, and practical insights into industry-standard development practices have equipped me with knowledge that will serve as a strong foundation for my professional career in software development.

Key Achievements Summary

- Successfully designed and developed a complete Restaurant Management Web Application using React.js.
- Mastered REST API integration with Axios including error handling, loading states, and real-time updates.
- Built a fully responsive, production-quality UI using Bootstrap 5 and modern CSS techniques.

- Implemented global state management using React Context API for cart functionality.
- Completed internship with Grade A+ (55/60) – a top performance indicator.
- Developed professional soft skills: time management, communication, and collaborative work ethic.

Letter of Internship Joining

Date: 15-10-2025

To,

Dear Ms. Mistri Sneha Alpeshbhai

Sub: Letter of Internship Joining

We are pleased to offer you an internship position in our organization as **React.js Intern**. We believe that this internship will provide you with valuable experience and learning opportunities in your chosen field. Your appointment at will commence on **1st November 2025**.

Stipend/Compensation: You will receive a stipend of 2000/- INR for the duration of your internship, payable in accordance with our company's payment schedule.

Duration: Your internship will have a duration of **120 Hours**, starting from **1st November 2025**.

To accept this internship, offer please sign and return a copy. You can send it back to us via email at vishal@tripolystudio.com or by mail to the address mentioned above. If you have any questions or need clarification on any aspect of your internship, please do not hesitate to contact Mr. Vishal Bharadva at vishal@tripolystudio.com or 9898869160.

We congratulate you on your appointment and wish you a long and successful career with us. We are confident that your contribution will take us further in our journey towards becoming world leaders. We assure you of our support for your professional development and growth.

Yours truly,
For Tripoly Studio Pvt Ltd,

Autho.Signatory

Internship Weekly Task Logbook

Intern Name: Mistry Sneha Alpeshbhai

Organization: Digital Tripoly Studio

Project: Restaurant Management / Website Development

Technology Stack: React.js

Mentor/Supervisor: Rushi Maru

Weekly Task Logbook

Week No.	Date	Task Assigned	Task Completed (Description)	Tools / Technologies Used	Supervisor Sign
Week 1	03/11/2025	Design Restaurant Menu with Description & Image	Designed responsive restaurant menu UI with item name, description, price, and image layout	React.js, JSX, CSS	
Week 2	10/11/2025	API Integration for Dynamic Menu	Integrated backend API to fetch and display dynamic menu data with real-time updates	React.js, REST API, Axios	
Week 3	17/11/2025	Design Restaurant Website	Developed full restaurant website UI including homepage, menu section, and navigation	React.js, CSS, Bootstrap	
Week 4	24/11/2025	API Integration for Dynamic Data	Connected APIs for dynamic content such as menu, categories, item availability, online orders and manage cart	React.js, REST API
